

Model Analysis Report

Generated: March 04, 2026

Dataset Information

Number of timesteps: 136214

Spatial grid: 50 latitudes × 24 MLTs

Time range: 2019-11-01 00:00:00 to 2024-01-31 23:56:00

Uncertainty available: Yes

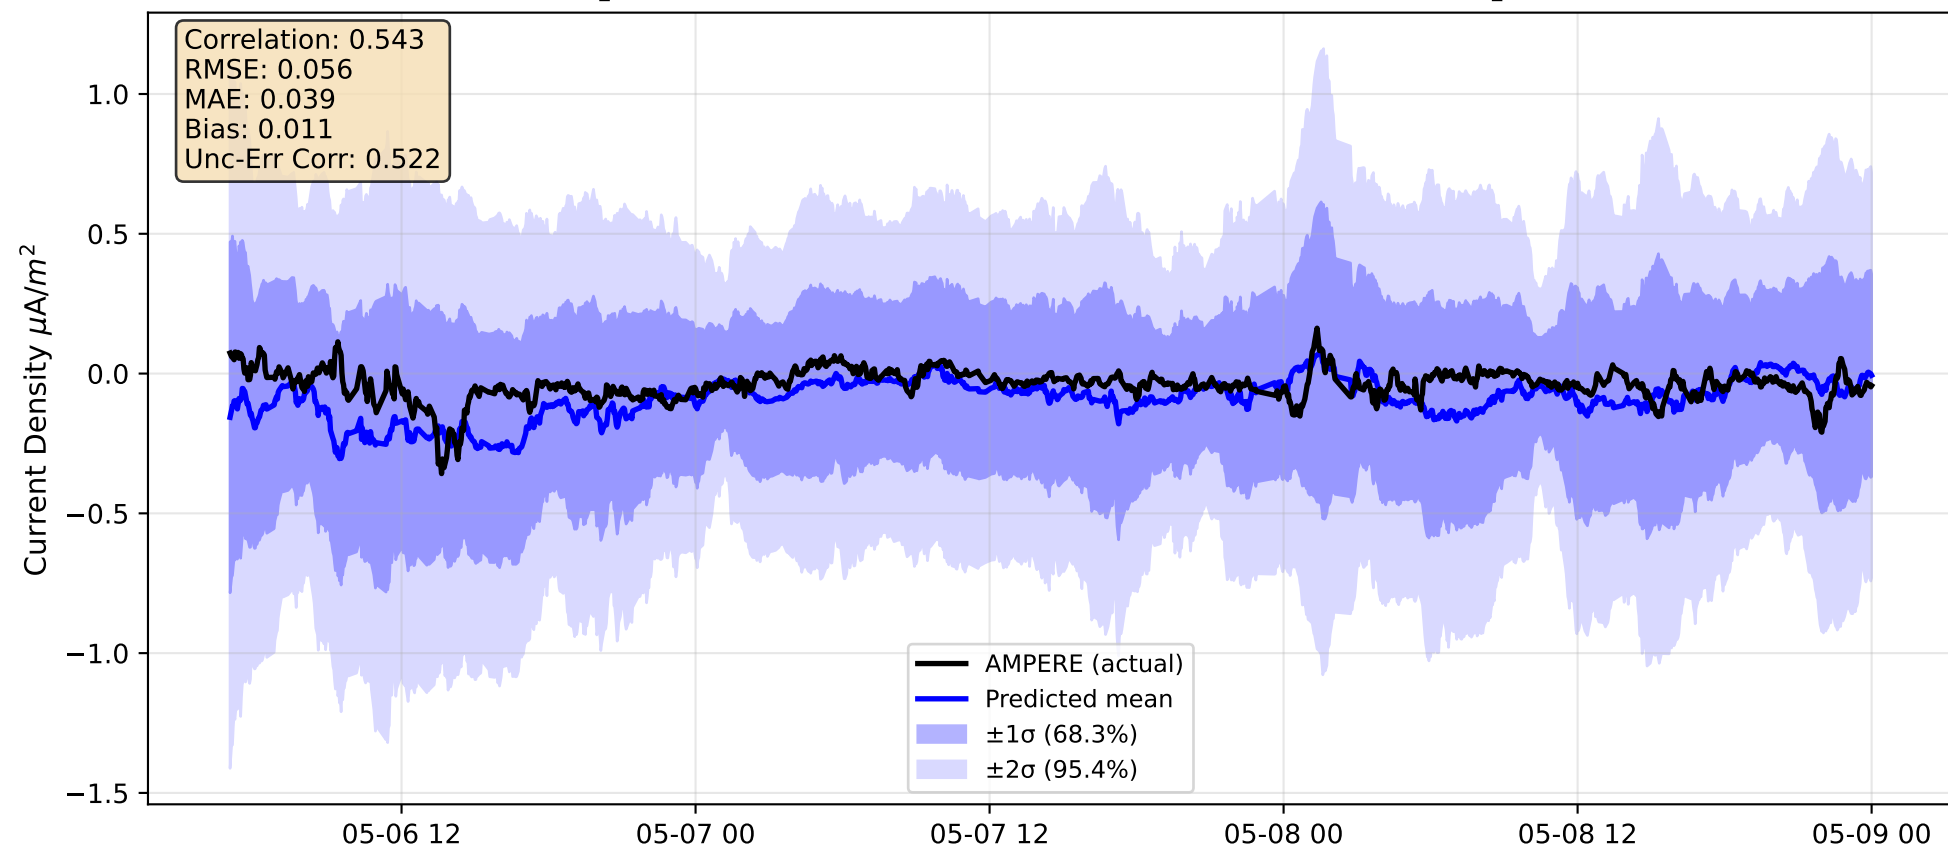

Analysis location: Lat 65-75°, MLT 22-2

Plot time range: 2023-05-04 00:00:00 to 2023-05-09 00:00:00

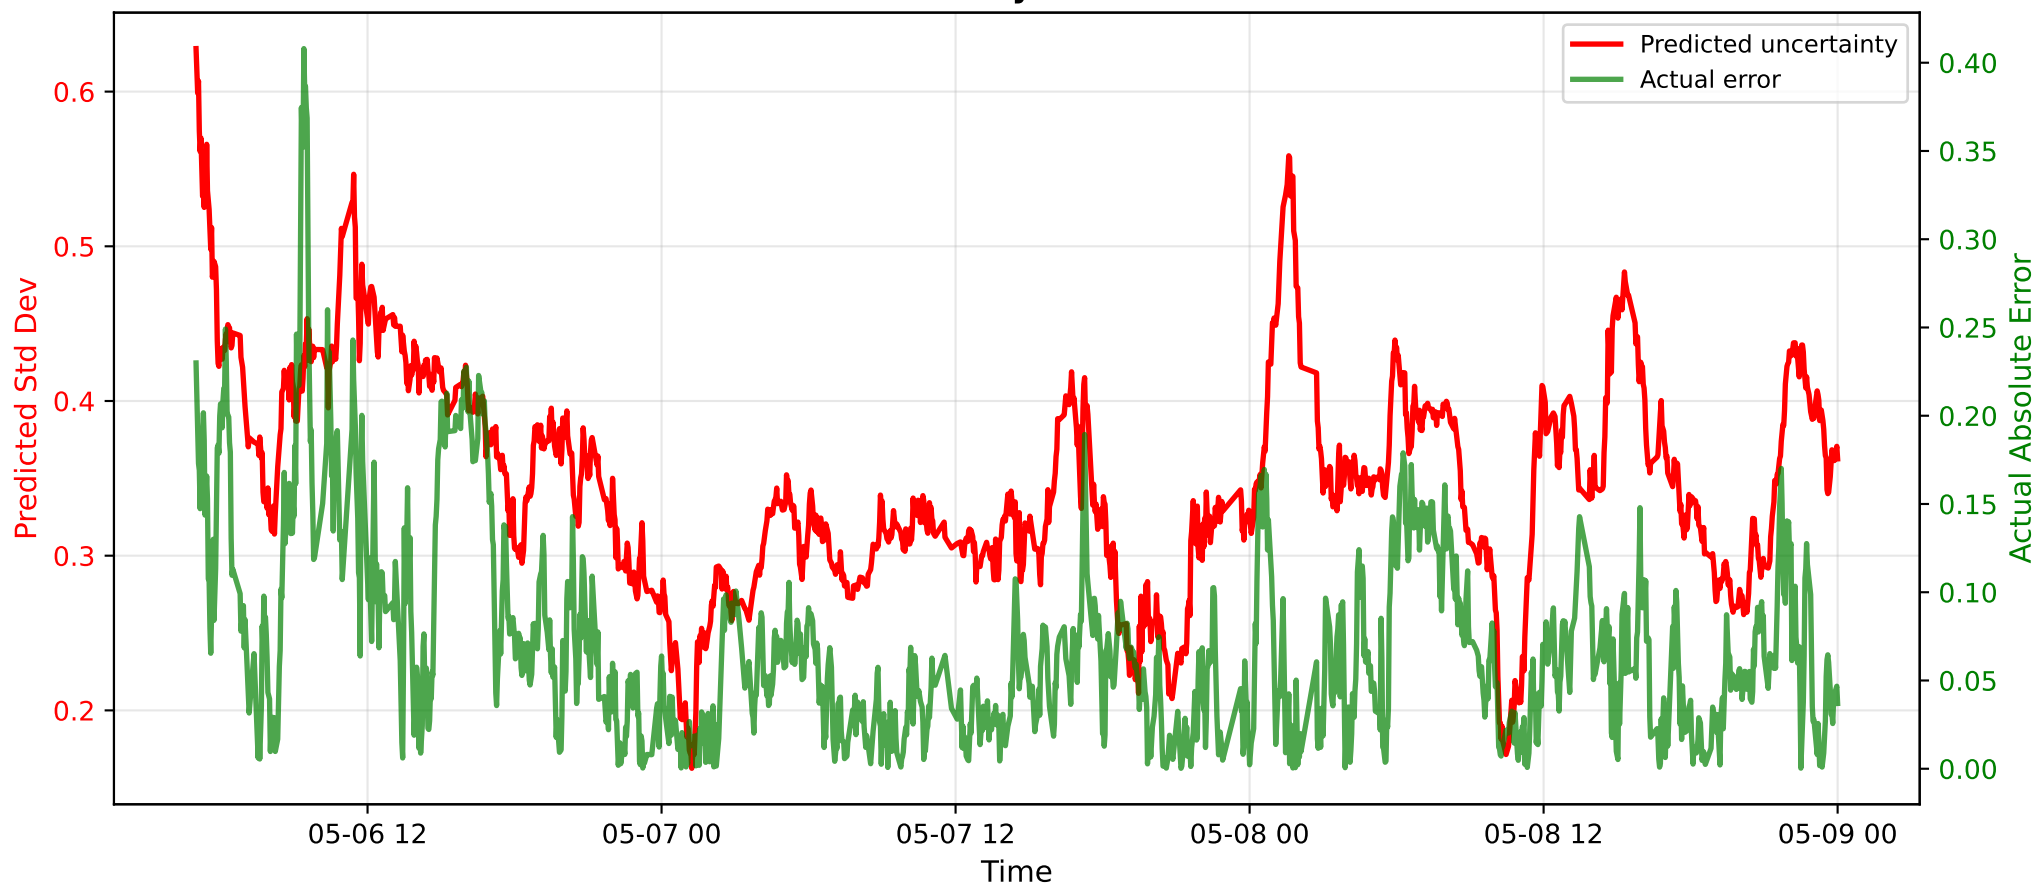

*This report contains comprehensive validation metrics
for geomagnetic model predictions*

Time Series with Uncertainty (Lat 65-75°, MLT 22-2)

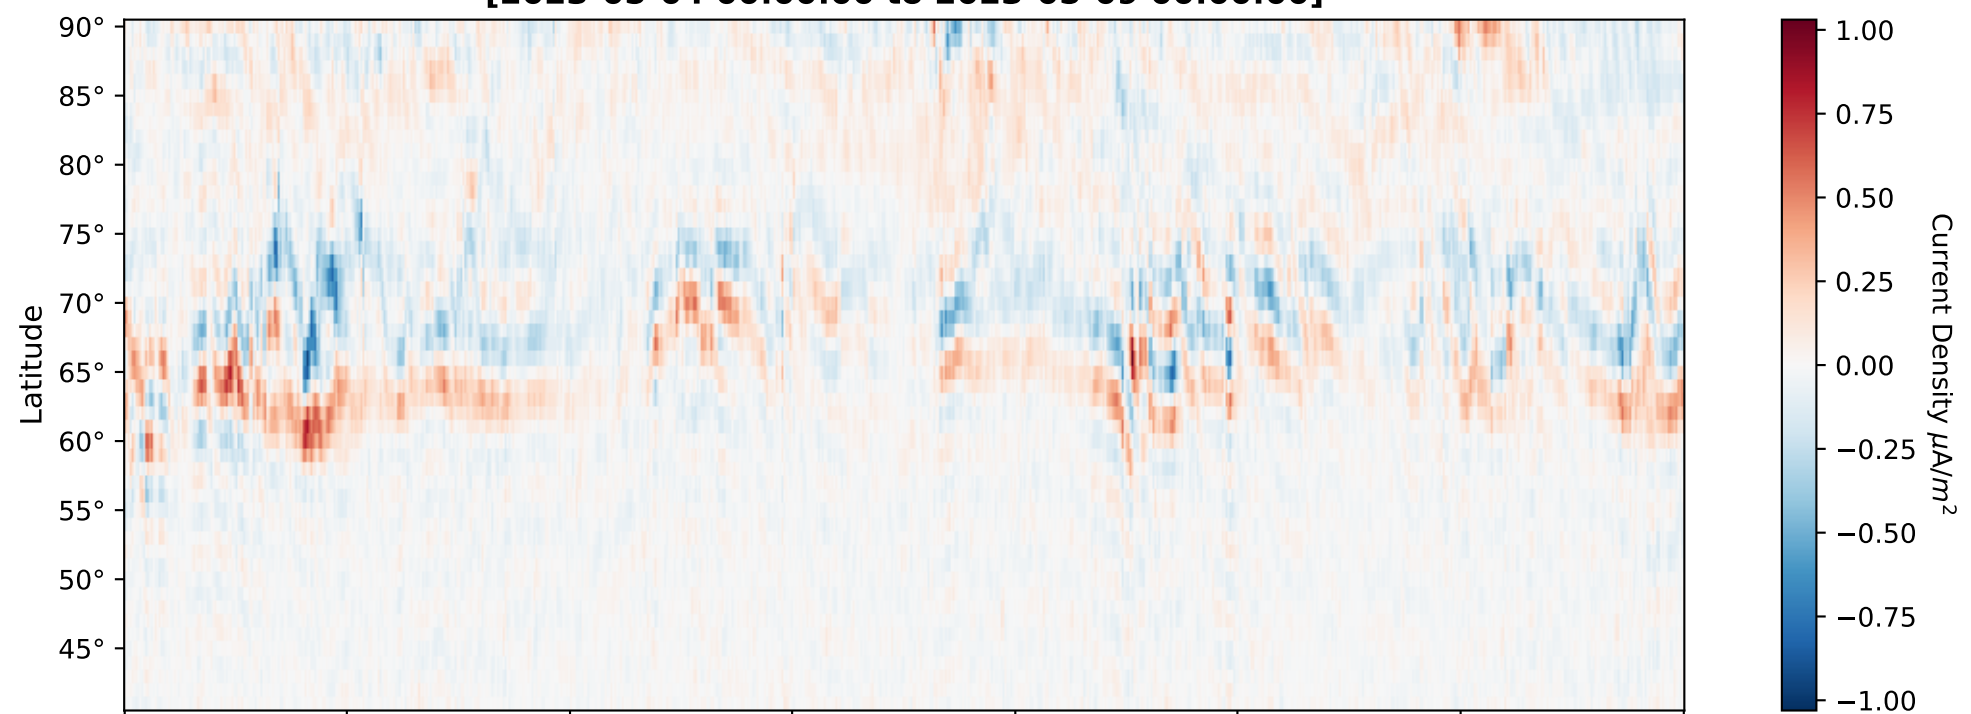

[2023-05-04 00:00:00 to 2023-05-09 00:00:00]

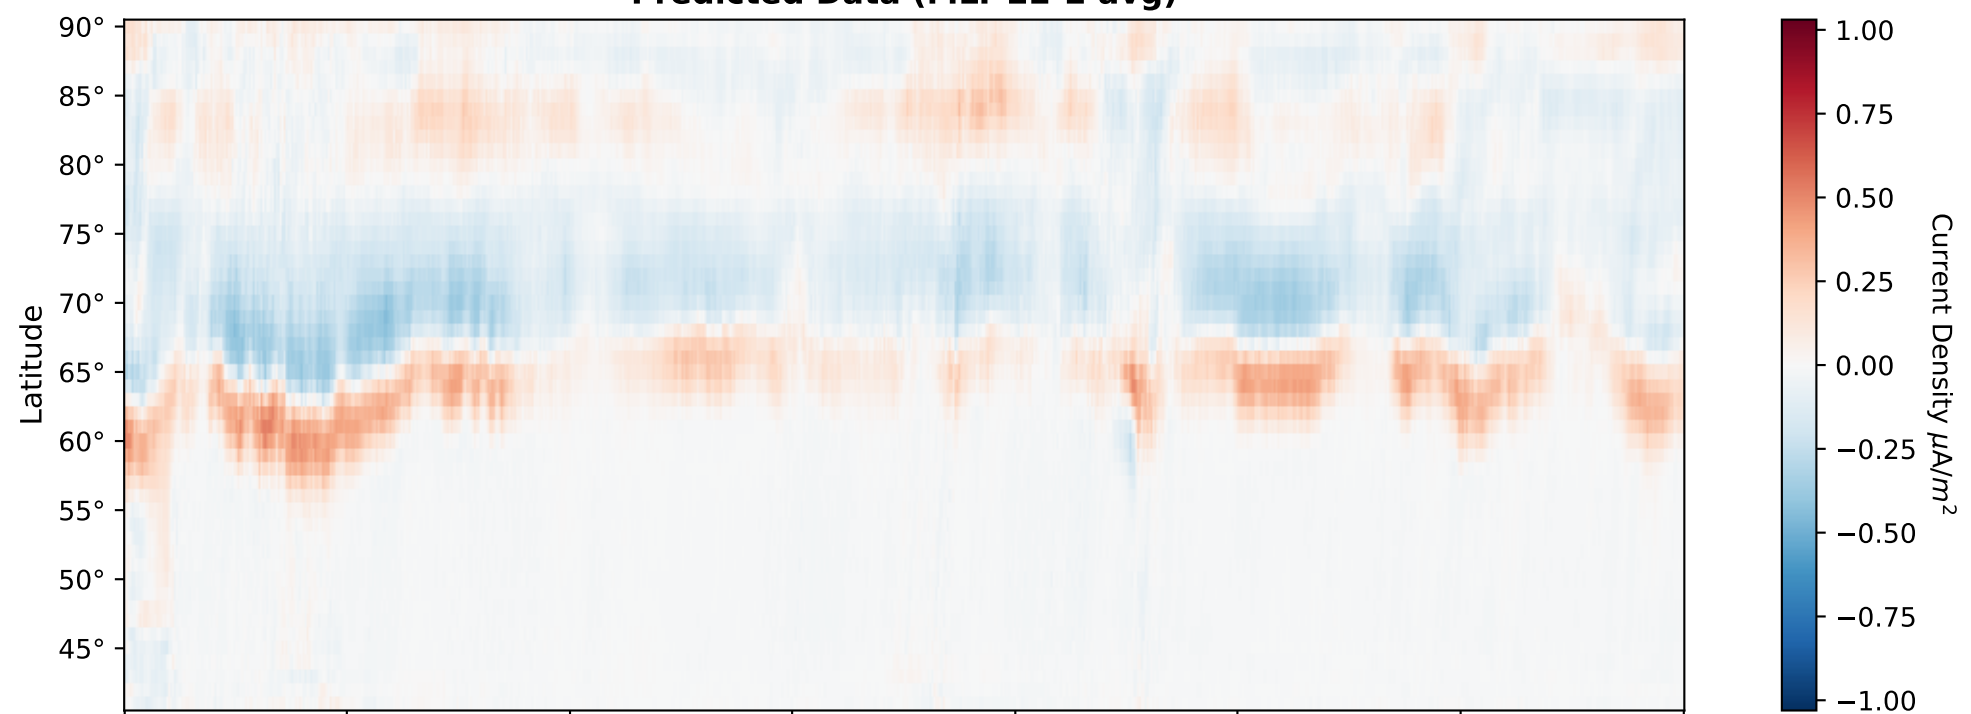

Uncertainty Evolution

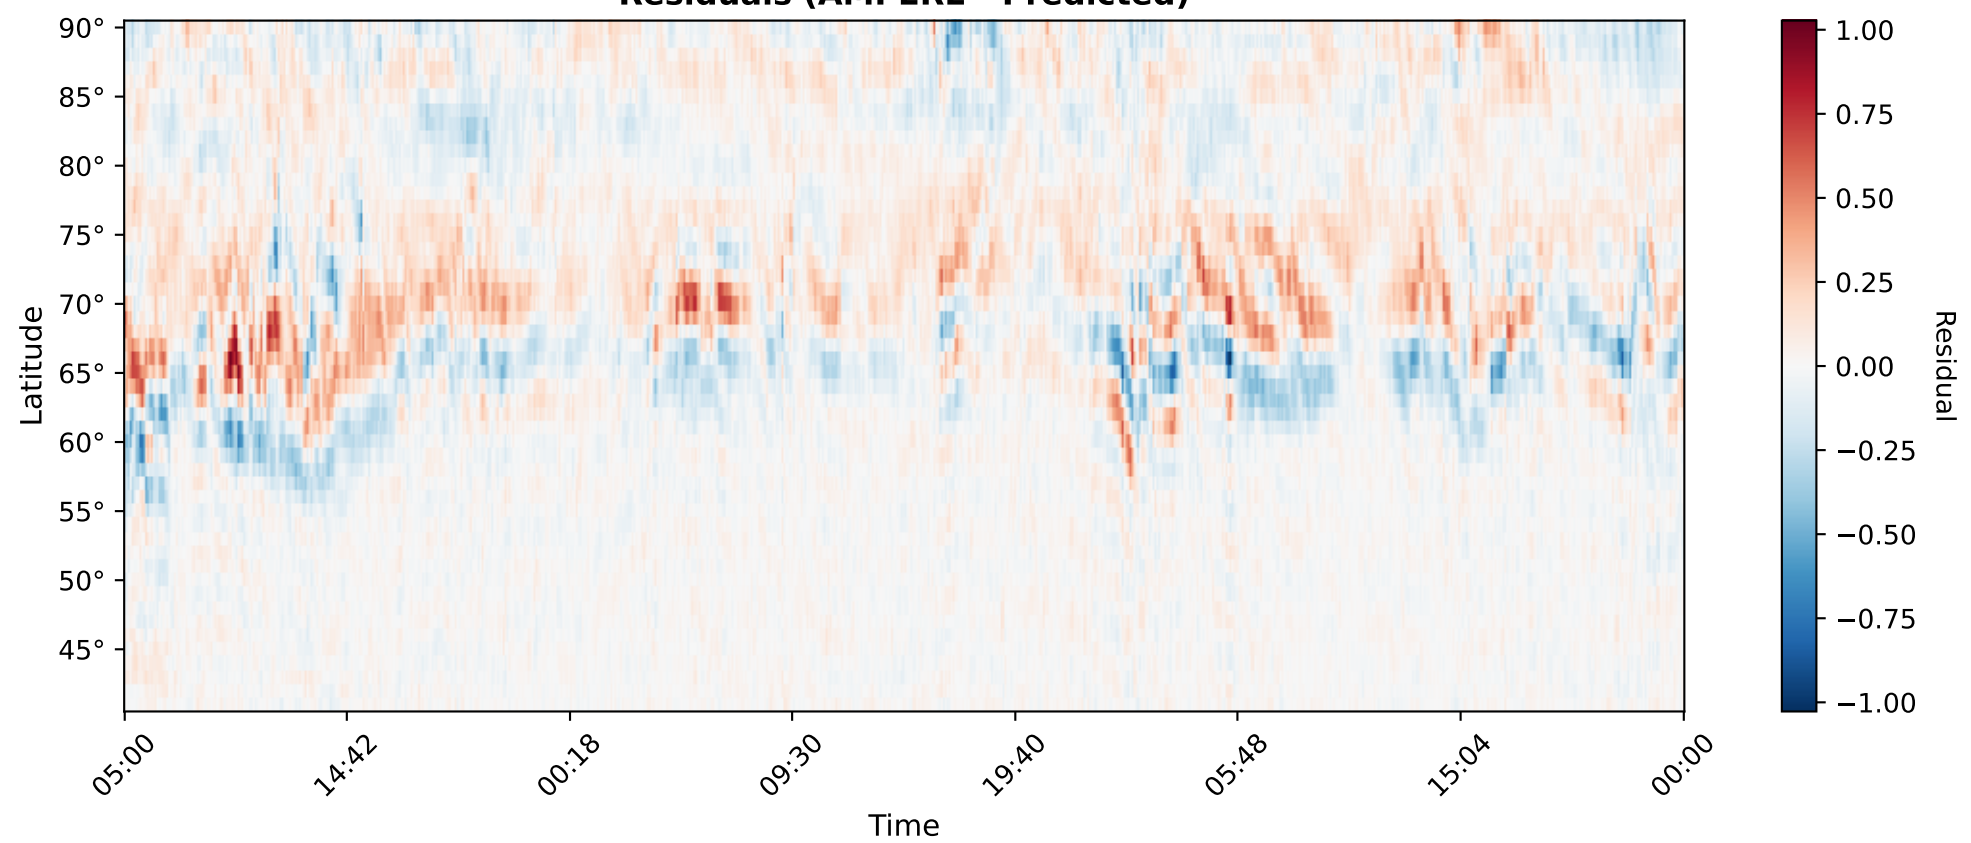

AMPERE Data (MLT 22-2 avg)
[2023-05-04 00:00:00 to 2023-05-09 00:00:00]

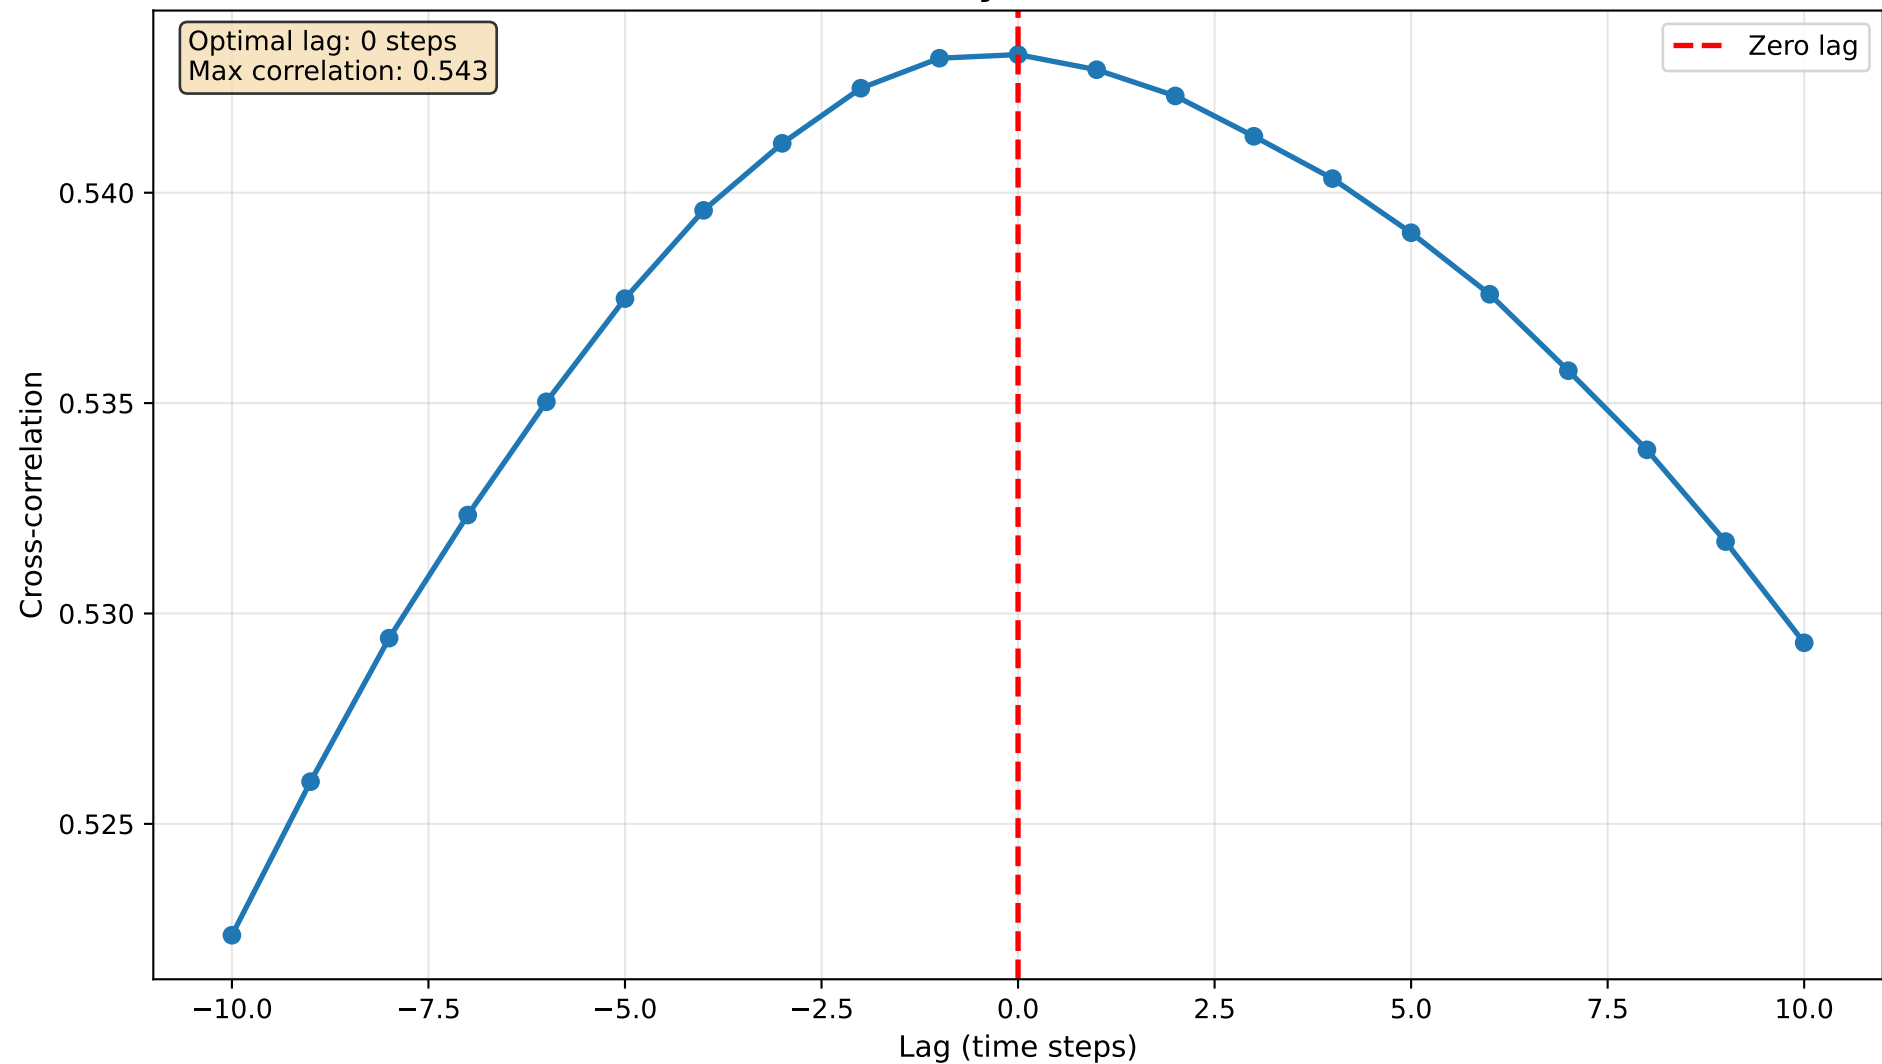

Predicted Data (MLT 22-2 avg)

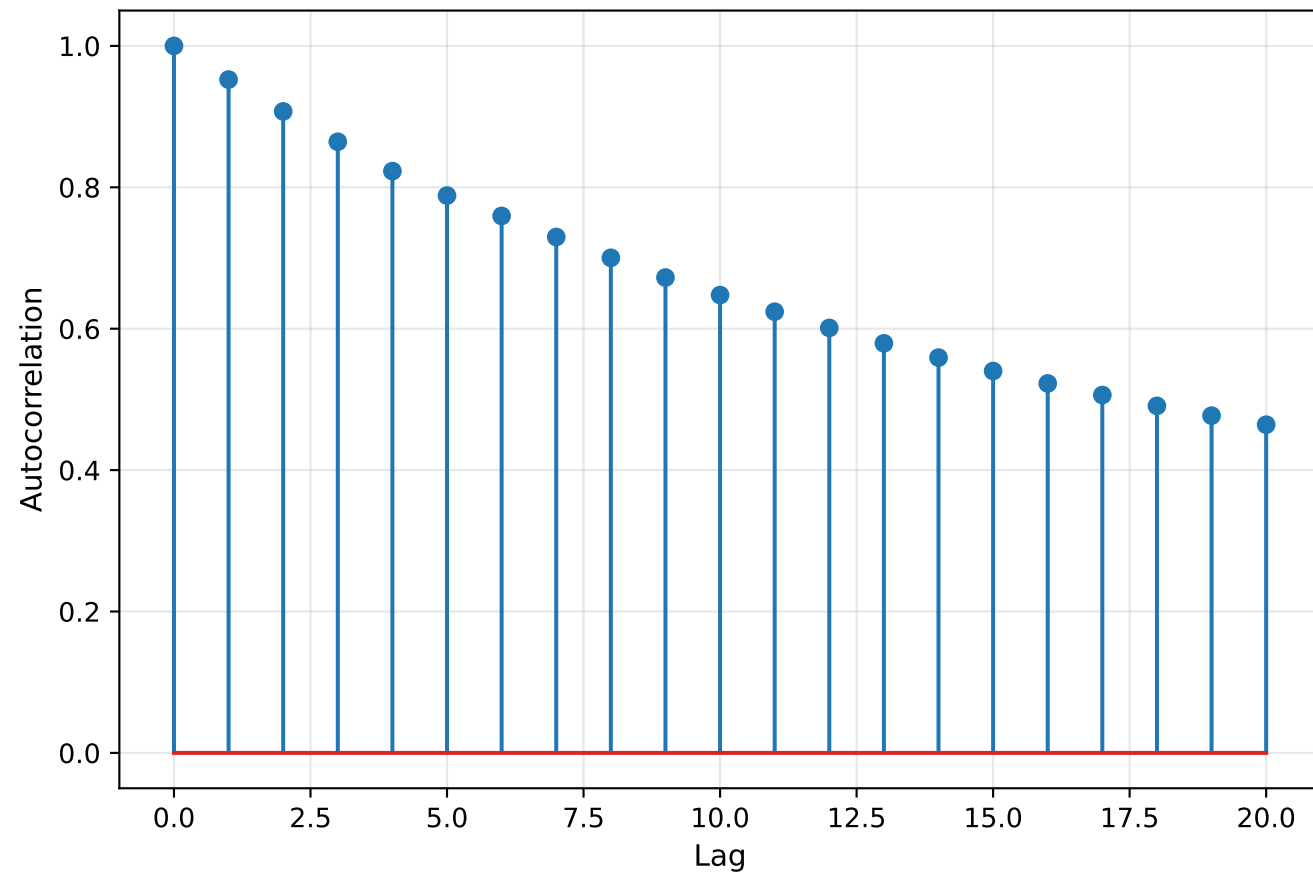

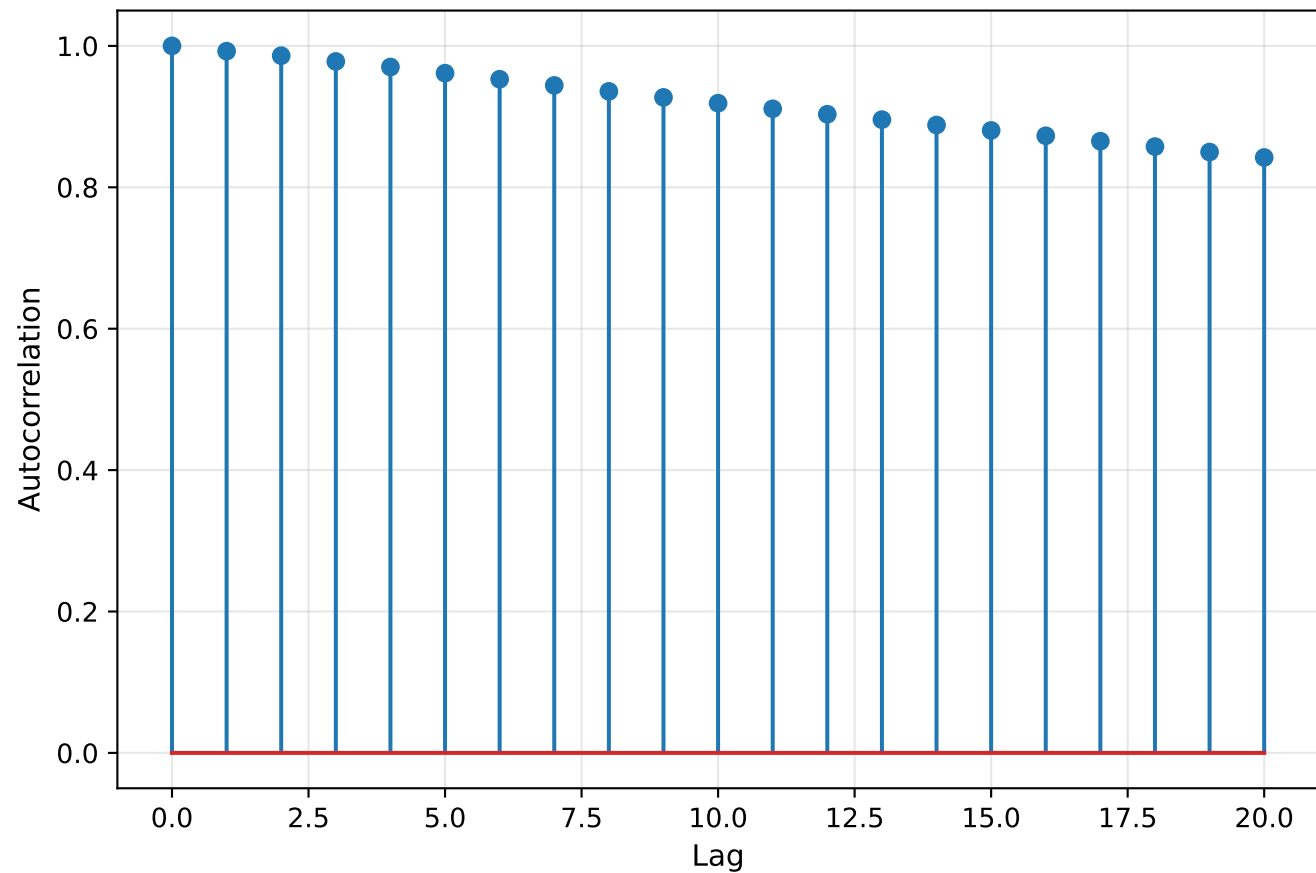

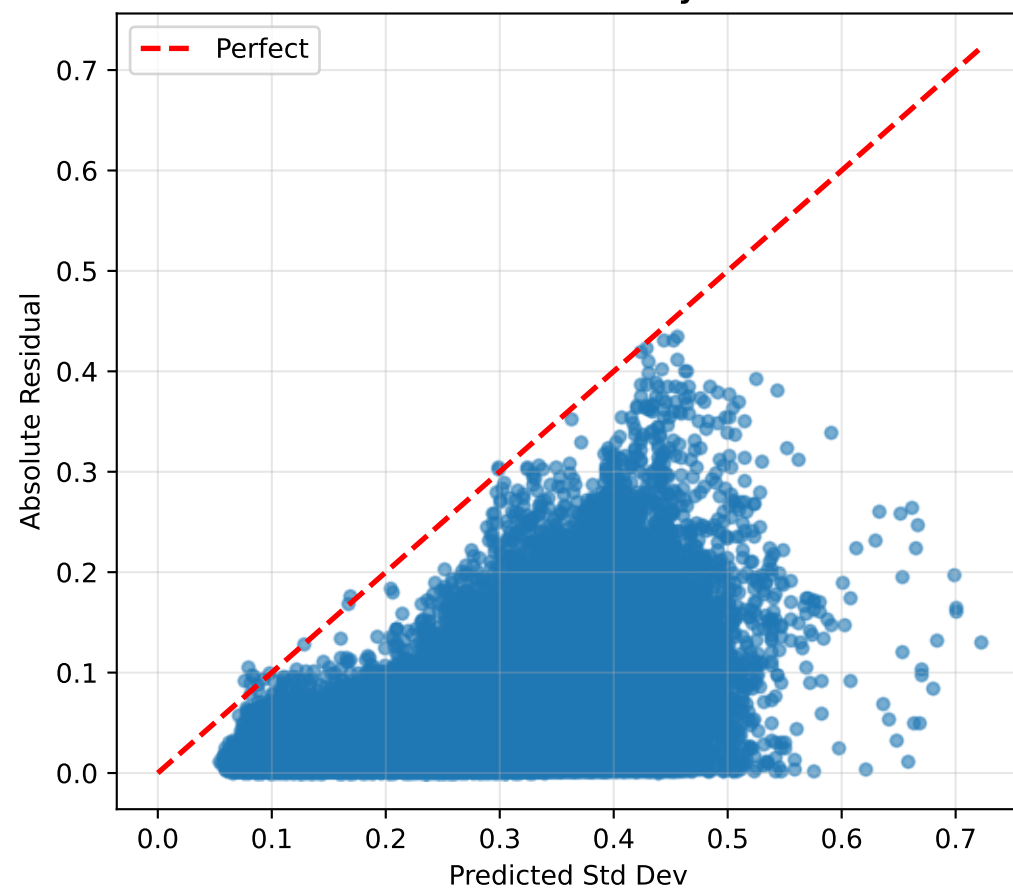

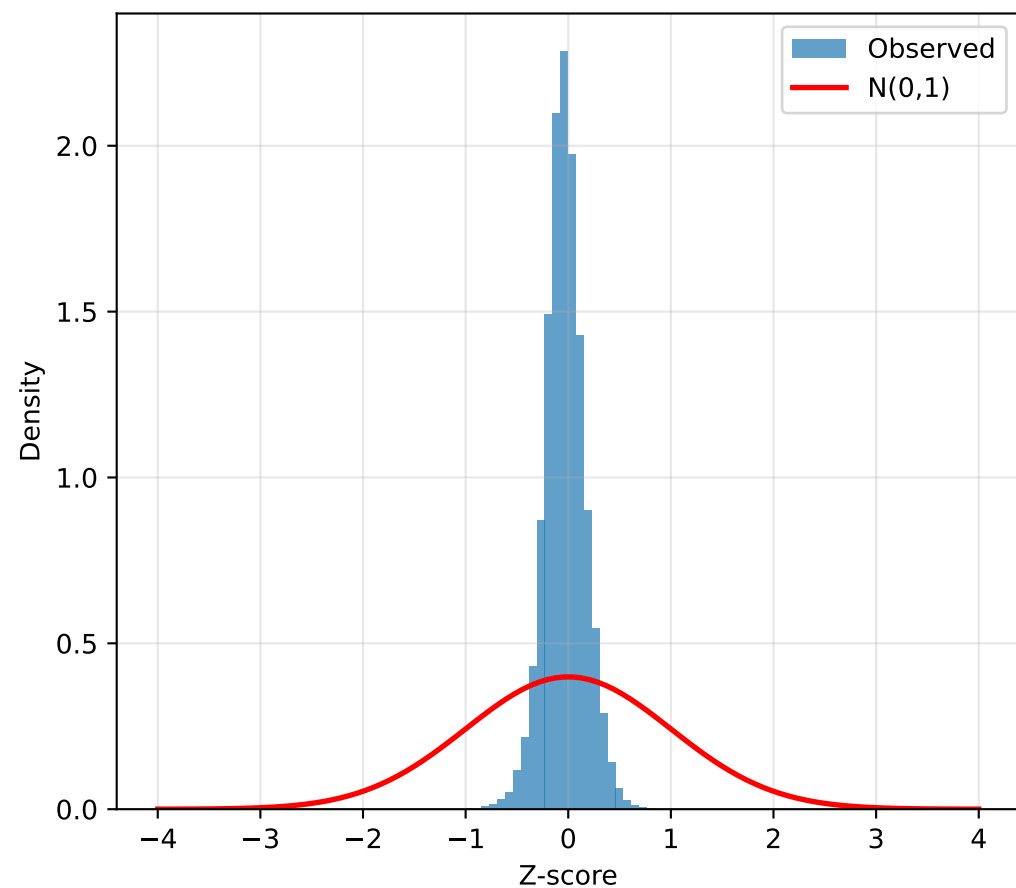

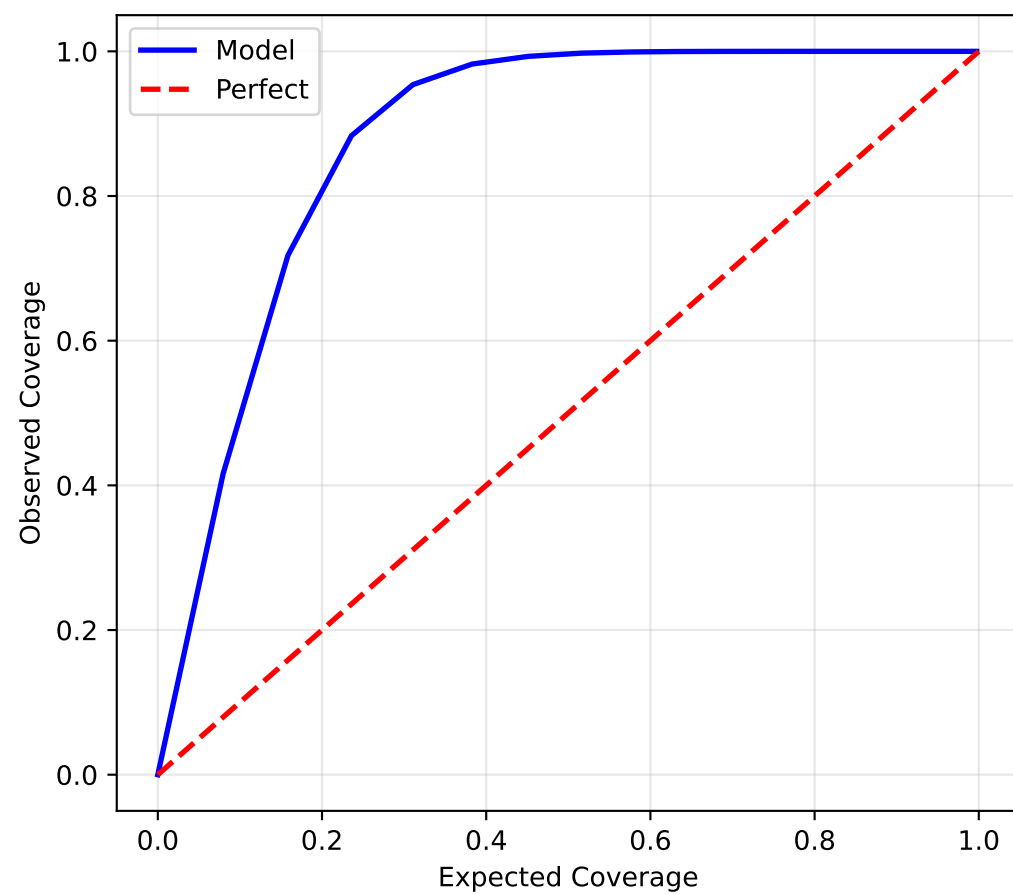

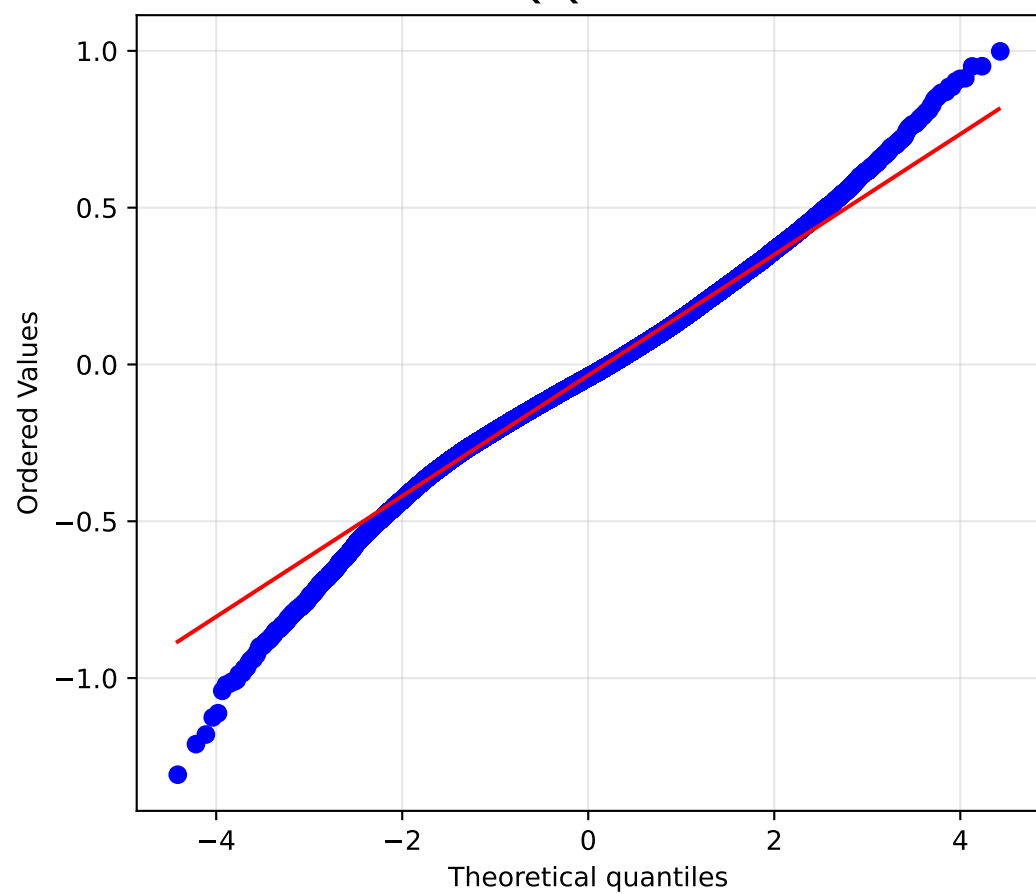

Residuals (AMPERE - Predicted)

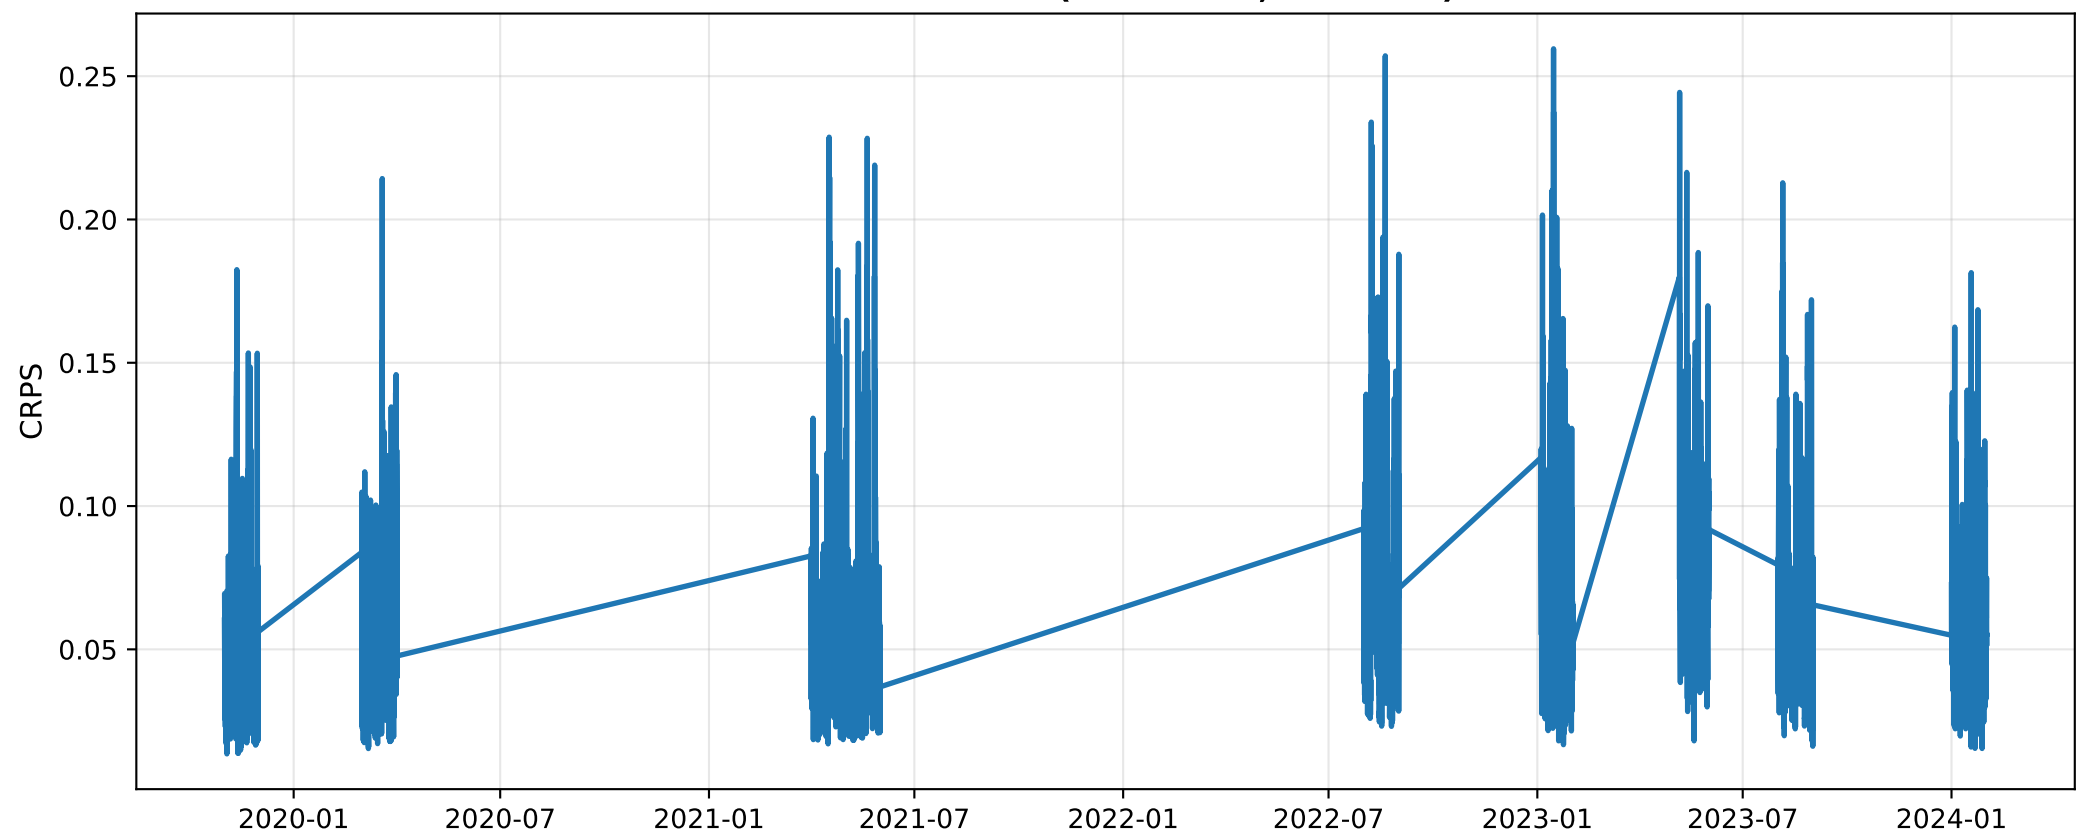

Cross-Correlation Analysis (Lat 65-75°, MLT 22-2)

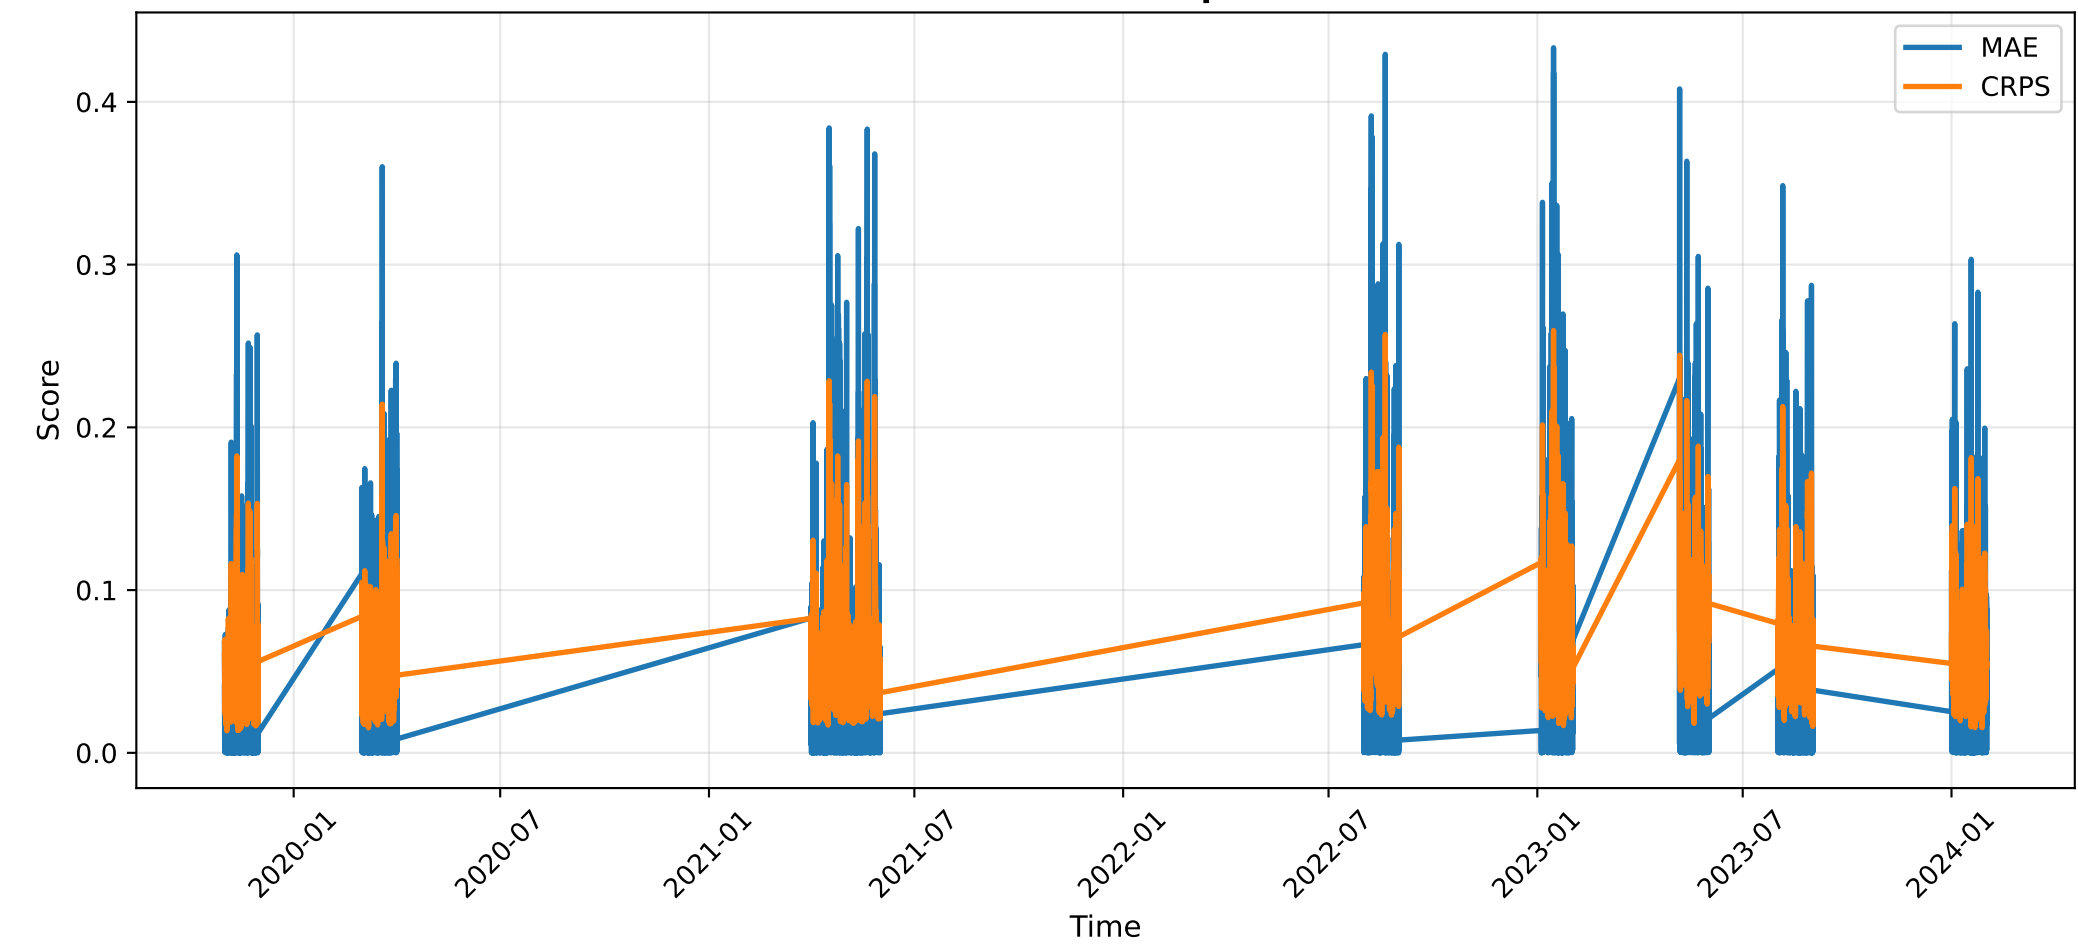

AMPERE Autocorrelation (Lat 65-75°, MLT 22-2)**Predicted Autocorrelation (Lat 65-75°, MLT 22-2)**

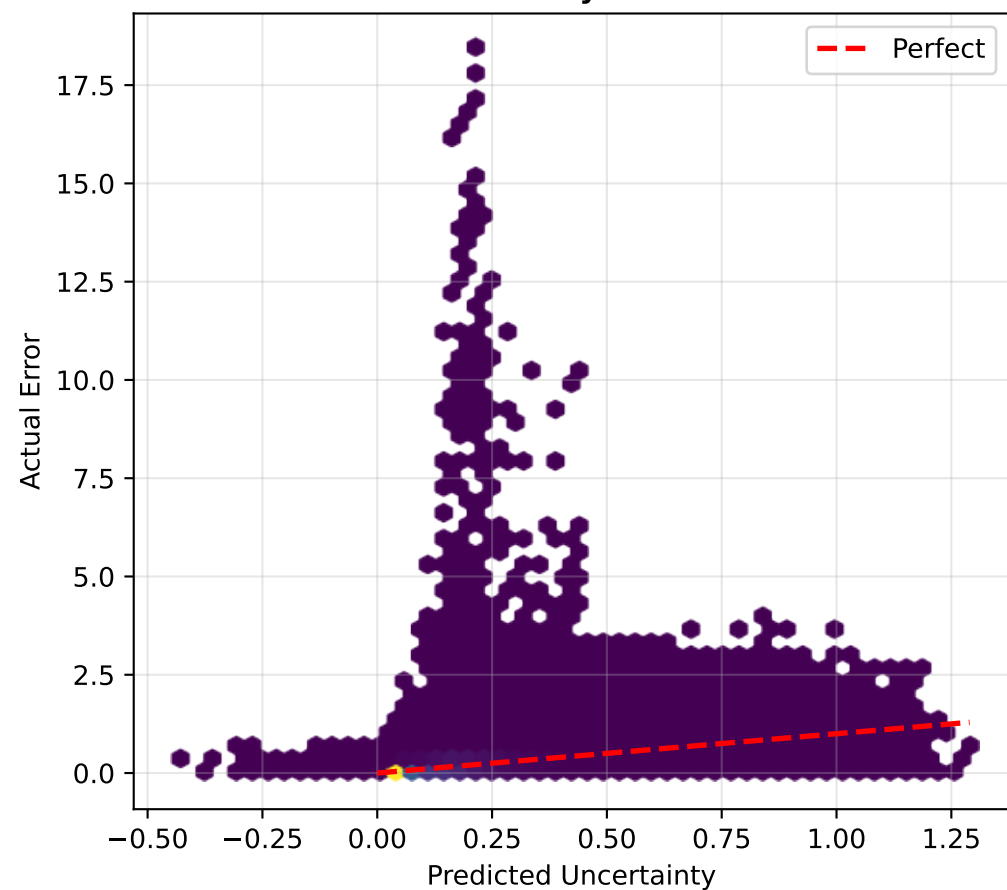

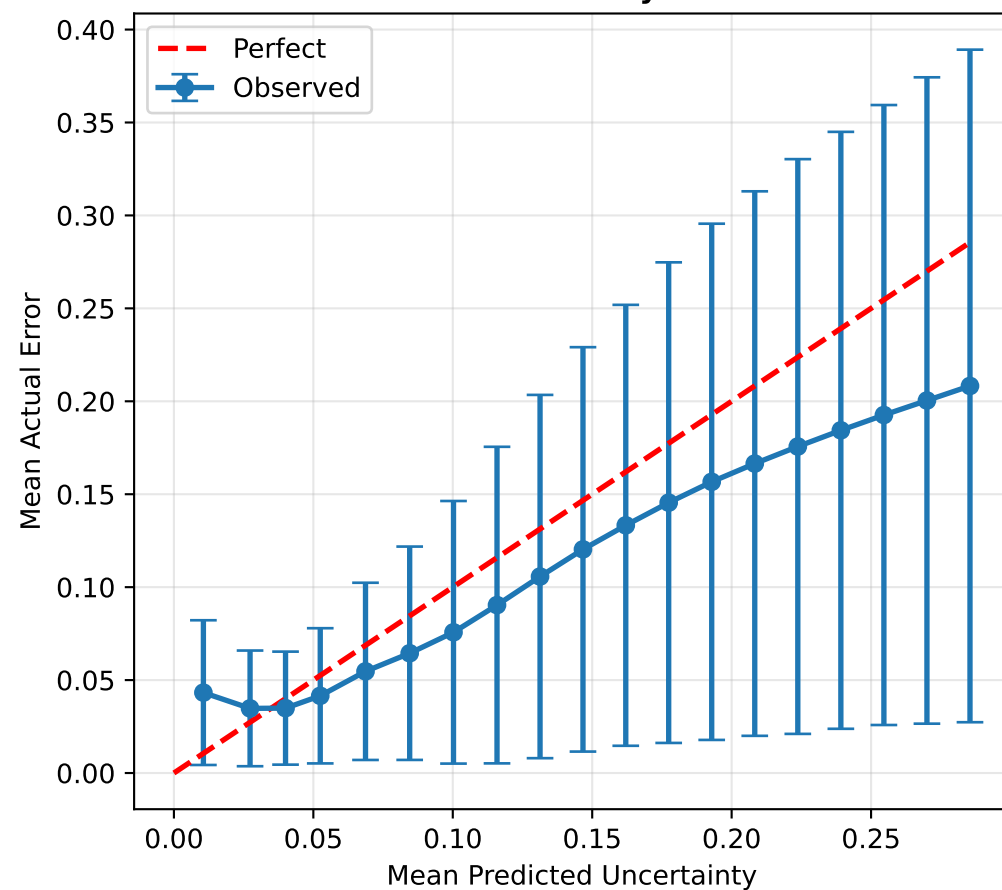

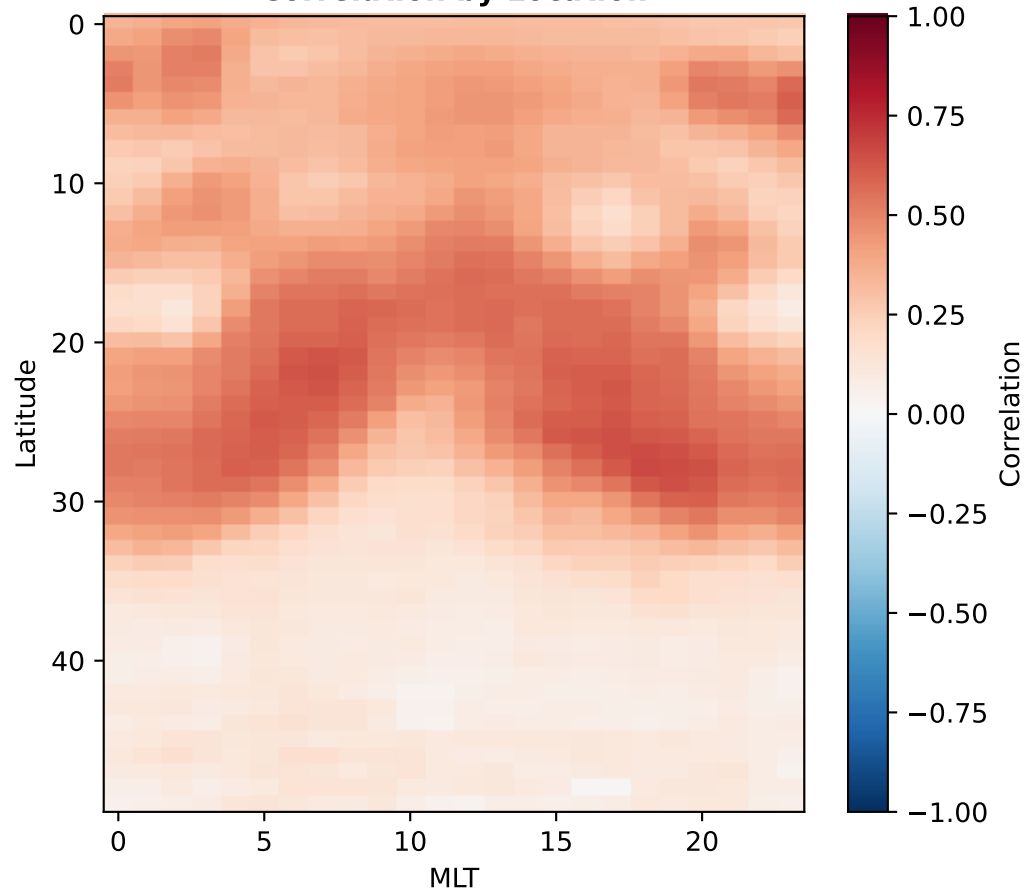

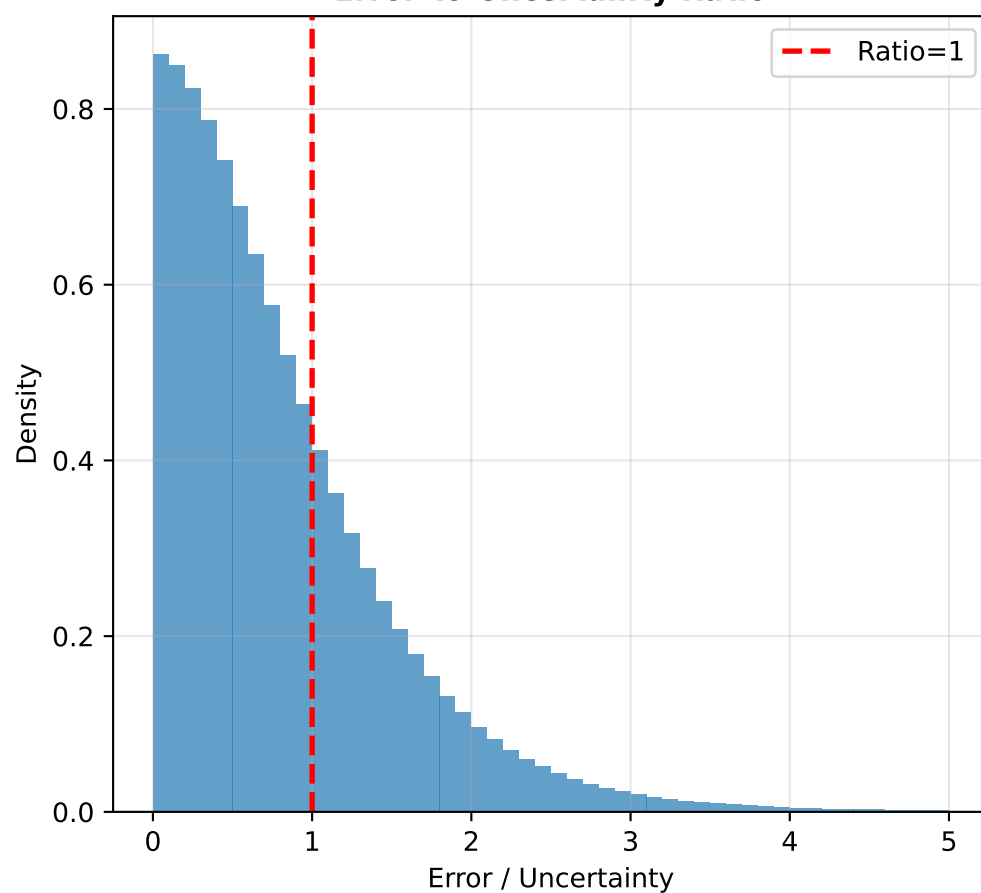

Calibration: Uncertainty vs Error**Z-Score Distribution****Calibration Curve****Q-Q Plot**

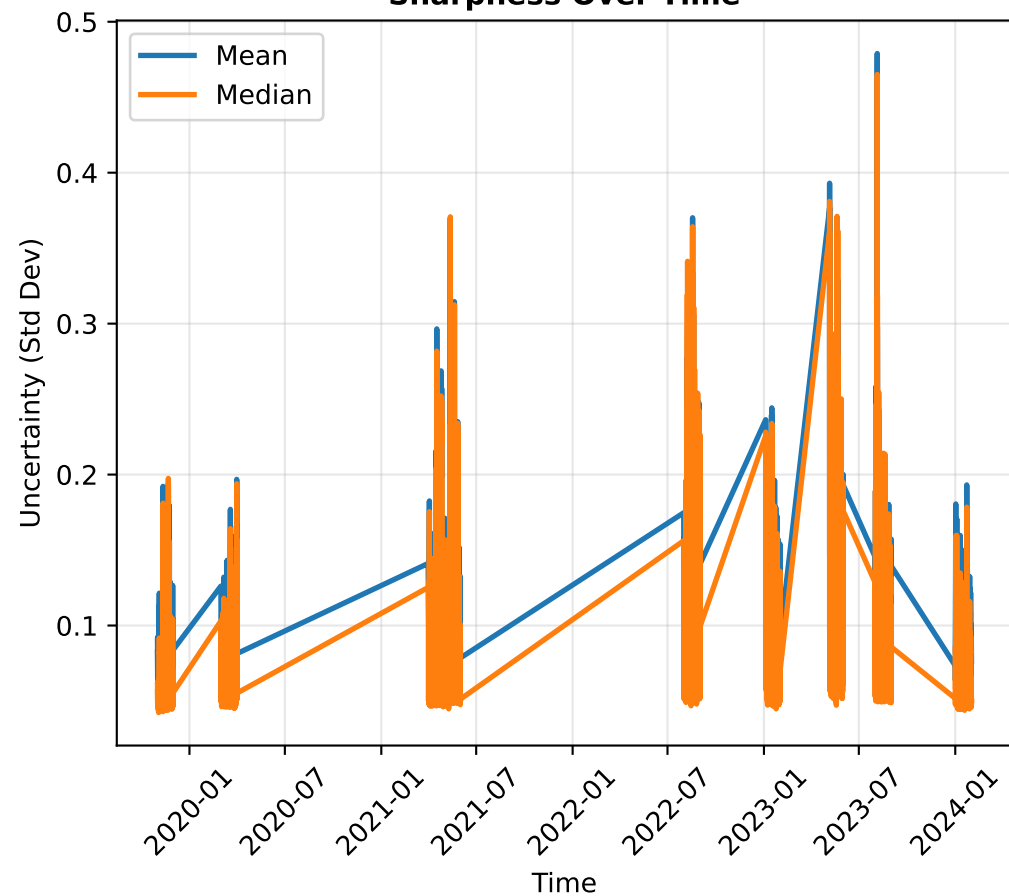

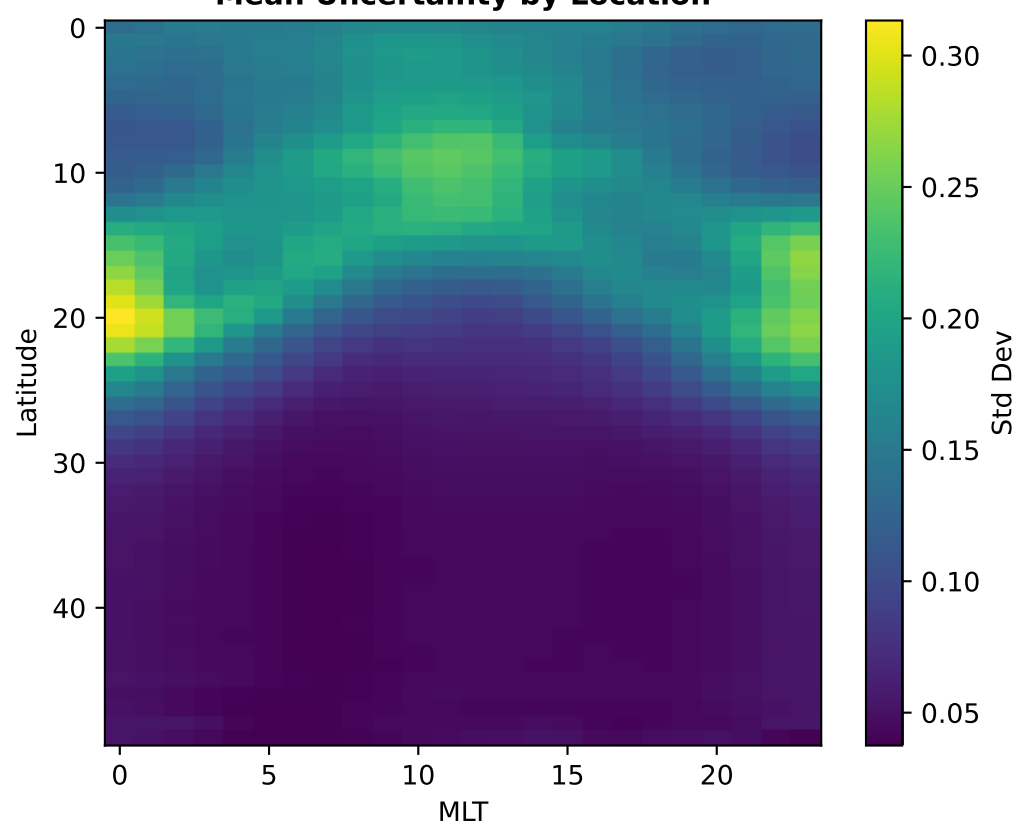

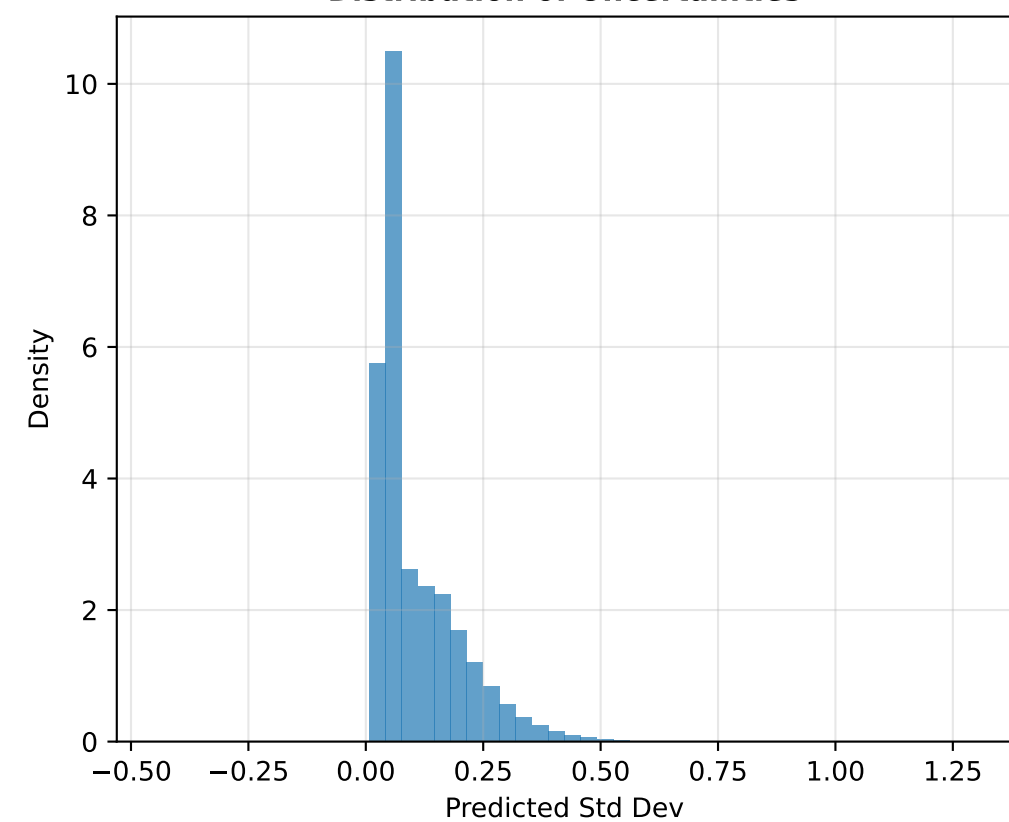

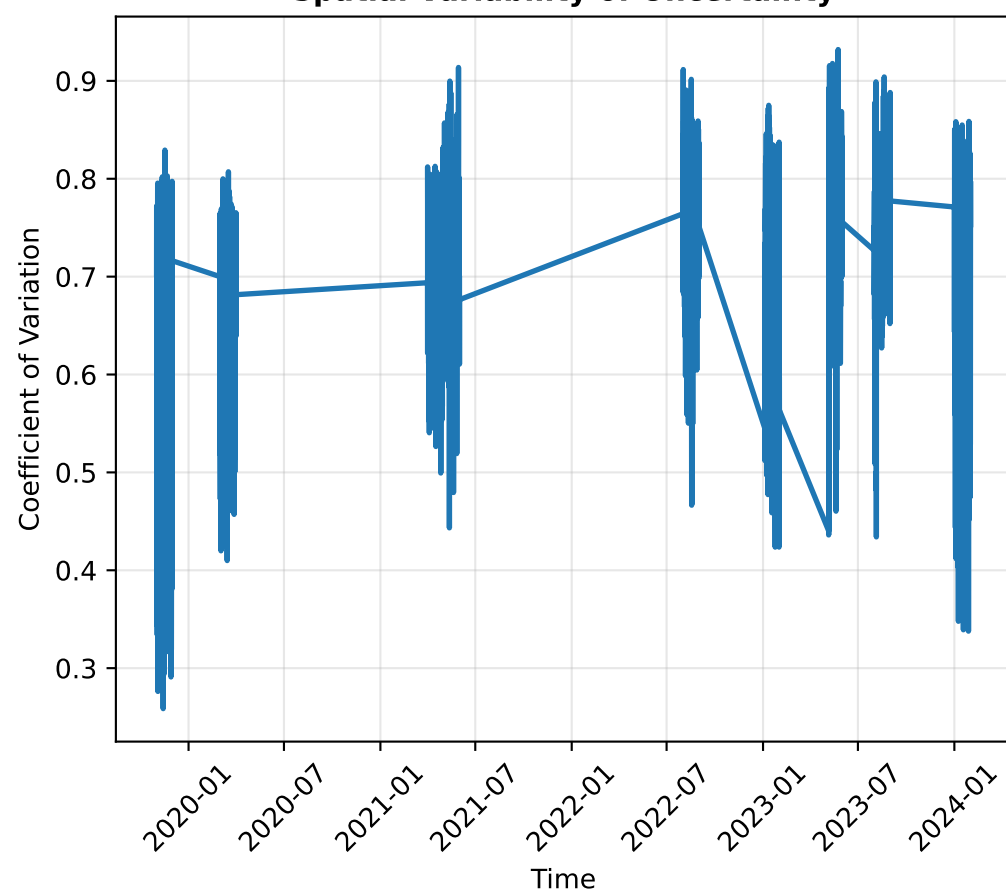

CRPS Over Time (Lat 65-75°, MLT 22-2)

MAE vs CRPS Comparison

Uncertainty vs Error**Binned Analysis****Correlation by Location****Error-to-Uncertainty Ratio**

Sharpness Over Time**Mean Uncertainty by Location****Distribution of Uncertainties****Spatial Variability of Uncertainty**

Numerical Metrics Summary

Deterministic Performance:

Point Correlation: 0.543

Point RMSE: 0.056

Point MAE: 0.039

Point Bias: 0.011

Uncertainty-Error Corr: 0.522

Optimal Lag: 0 timesteps

Max Cross-Correlation: 0.543

Uncertainty Quantification:

Coverage within 1σ : 100.0% (target: 68.3%)

Coverage within 2σ : 100.0% (target: 95.4%)

Z-score mean: -0.035 (target: 0)

Z-score std: 0.193 (target: 1)

Mean CRPS: 0.0605

CRPS/MAE Ratio: 1.566

Uncertainty-Error Correlation: 0.567

Median Error/Uncertainty Ratio: 0.639

Executive Summary

Point Performance:

Point prediction at Lat 65-75°, MLT 22-2 shows moderate correlation ($r=0.543$) with $RMSE=0.056$. Model exhibits positive bias of 0.011. Uncertainty-error correlation is 0.522, indicating strong awareness of prediction quality.

Spatial Performance:

Spatial analysis at MLT 22-2 shows mean $RMSE$ of 0.083 across all latitudes. Maximum errors (0.187) occur at high latitudes.

Temporal Alignment:

Model predictions are temporally well-aligned with observations. Maximum achievable correlation is 0.543.

Temporal Dynamics:

Autocorrelation analysis shows decorrelation timescales of 20 timesteps for observations and 20 timesteps for predictions. Model captures temporal persistence well.

Uncertainty Quality:

Uncertainty calibration is poor: 100.0% within 1σ (expected 68.3%), 100.0% within 2σ (expected 95.4%). Model is underconfident (uncertainties too wide). Z-score statistics: mean=-0.035 (ideal: 0), std=0.193 (ideal: 1).

$CRPS/MAE = 1.57$; Uncertainty does not add value beyond point predictions. Mean $CRPS=0.0605$, Mean $MAE=0.0386$.

Uncertainty-error correlation is 0.567, indicating weak relationship. Median error/uncertainty ratio is 0.639 (underconfident (uncertainties too large)). Model shows moderate awareness of uncertainty patterns.

Uncertainty Characteristics:

Model sharpness: mean uncertainty=0.1073, median=0.0623. Temporal variability ($CV=0.365$) suggests condition-dependent uncertainty. Spatial variability ($CV=0.611$) indicates location-dependent confidence.
